

► **Floating Sunglasses**

Gill's new 2010 line of floating sunglasses have been cleverly designed for use on the water, and not only provide high quality polarized lenses but are also comfortable and stylish to wear. The frames are made of a low density plastic for maximum buoyancy so they float, and have been molded in a wrap-around design so they stay anchored to your face, whatever the weather. Extra comfort and grip comes from the use of ingenious soft pads that cushion the temple, and a neat integral molding for the bridge of the nose.

The polarized lenses give optimum distortion free UV protection, as well as providing the ability to see clearly through the water's surface glare.

► **The Perfect Interior Topcoat**

ALEXSEAL® Waterborne Topcoat is a water reducible, two component polyurethane developed for the demanding needs of the global marine market. This highly durable product has been formulated into an innovative marine specific interior coating using ALEXSEAL's proprietary, state-of-the-art polyurethane technology.

ALEXSEAL® Waterborne Topcoat provides the builder and applicator with the desired performance characteristics of a solvent-borne paint, without the odor, flammability and other negative characteristics that would inhibit applying a highly durable product in an enclosed environment. The green alternative you have been looking for; plus the fastest drying time in its class saves precious time and money, and gets you on the water faster. Ideal for engine rooms and lockers, as well as other interior surfaces where a waterborne product is desired.
